Introduction

An anagram dictionary sounds oxymoronic. After all, if you knew which anagrams could be made from any particular word, you would already know what words to look up in the dictionary – and consequently, you wouldn't need the dictionary.

However, an anagram dictionary isn't organised like that.

Instead, every word is given a code. This code is generated so that any two words with the same collection of letters will be identical. You therefore generate a code for your word, and all the other anagrams will be listed beside that same code.

This code is generated simply by grouping all the letters in the word together in alphabetical order. Duplicates are retained. That's it!

The word 'CAT' would have the code 'ACT', for example. And 'DICTIONARY' would use 'ACDIINORTY'. Instead of trying to sort the letters in your head, simply recite the alphabet and cross out every letter when it appears, and add it to the start of a new list. You can then look through the dictionary of codes, which are listed alphabetically, to find your word and all its anagrams. It's that easy!

The Anagram Dictionary

All of the words are given in several orders. In the first case, we list them alphabetically according to the code. Then, we detail the words with the most anagrams, and then the longest words that have anagrams.

The dictionary used here is an amalgamation of several freely available ones. Consequently, it will contain many rare, obscure, and odd words that won't appear in your spell checker. Additionally, many proper nouns are included, which are banned from many word games. It is up to the reader to ignore or utilise these words as appropriate.

Physical Characteristics

We now have three shorter collections of words. These are words that can be flipped, mirrored, or rotated and remain legible – either as themselves or another word. In all case, careful font choice (or handwriting) is necessary to pull off the illusion that either word could be the 'correct' and intended one.

The Mirrored Dictionary

What follows are those words which can be also read in the mirror, either as themselves or as another word. For example, when written in capital letters, 'MUM' reads the same because all of its constituent letters are symmetrical about their vertical centre. We term these 'symmetrically mirrored words'. The set of available letters are:

AHIMOTUVWXY

To contrast, the word 'YAW' reads 'WAY' in the mirror. Again, all the letters are symmetrical, but the words are different - one being the reverse of the other. We term these 'asymmetrically mirrored words'.

There aren't many words that fit this pattern, but there may be a use for them. Additional lists are given for words using only lower case. This expands the possible word list to include the letters:

bdimopqtuvwxy

However, in this case, certain letters are transposed, as 'boom' becomes 'mood' because the mirrored 'b' now reads as 'd'. When using these letters it is therefore necessary to be careful and use san-sarif fonts.

Symmetric – Upper case

4 letters

otto	toot

dom	mop	tob	

The Flipper Dictionary

What follows are those words which are reflective about their horizontal axis. That is, any word composed of the capital letters:

BCDEHIKOX

One way to experience these words is to write them in thick black ink, on a thin napkin. When the ink sinks through, the same word will be visible on the other side of the napkin when you turn it over.

In contrast, lower case letters provide a much smaller canvas from which to work as only the following letters are available:

cikox

The other point of interest is that because the letters themselves are reflective, each letter maps to itself in the 'flipped' version. Consequently, there are no asymmetric words.

Upper case

The Ambigram Dictionary

An ambigram is a word that can be also read upside down. That is, rotated through 180 degrees around its centre. Again, there are symmetrical ambigrams where the same word appears (such as 'NOON'), and asymmetric ambigrams where the word differs.

There are only nine letters that be rotated and still remain legible. Capital letters like 'P' become a lower case 'd' when rotated and break the illusion, and so are not included. These letters are:

HIMNOSWXZ

In essence, this is a poor man's ambigram, since many more words can be used through careful artistic design. For an example of this, seen the cover Dan Brown's book "Demons and Angels".

When using lower case you have slightly more leeway, with the following letter set:

bdilmnopqsuxzw

Symmetric - Upper case

The Palindrome Dictionary

A palindrome is any word that reads the same forwards as it does backwards. This list of words is comparatively small, and included here only for completeness. After all, all of the truly clever palindromes with which we're familiar do not use palindromic words, and rely on ingenious use of space to turn many non-palindromic words into one long palindromic sentence. Even the simplistic, "Madam, I'm Adam", contains only one palindromic word.

Paragram Dictionary

A paragram is essentially a single word pun; a word formed by changing a letter or group of letters in one word to form another. This definition covers many possible variations of word, so for our purposes it is any word that can be composed using the same numbers on a mobile phone keypad. These are sometimes called "textonyms", "adaptonyms", "cellodromes", or "T9onyms".

For reference, the following numbers map the letters given:

2	A B C
3	D E F
4	G H I
5	J K L
6	M N O
7	P Q R S
8	T U V
9	W X Y Z

Note that 0 and 1 have no letters upon them.

Therefore, 222 could represent "aba", "cab", or one of four other possible words. We now present a the numerical list of words, followed by those numbers with the most paragrams.

277	apr	arp	asp	ass	brr				5
